

Open Order Book offers regulated entities advanced electronic exchange software to power order-driven securities exchanges around the globe.

Fiat On-ramp & Off-ramp
Trading-pairs are quoted, traded and immediately settled exclusively against the exchanges' deposits of fiat currency.

Full Transparency
Offers to buy and sell shares are displayed in real-time, unlike a traditional order book which only displays volumes provided by market makers.

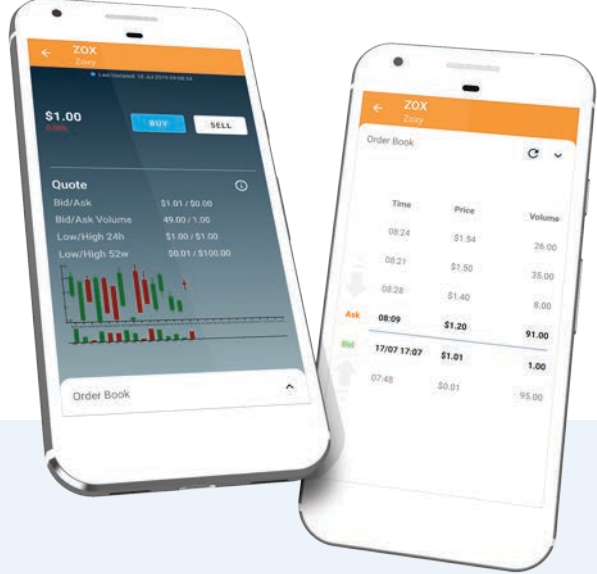

Hack Safeguards
Traders alone hold their cryptographic key and all trades are digitally signed, adding increased investor protection from dangerous hacks.

Order Driven Marketplaces
Designed to look and feel like a traditional public marketplace with trades conducted on a best bid and offer basis, with integrated cash custody services.

Cryptographically Secure Trading
All transactions are cryptographically secure with timestamped transaction records stored on regulatory compliant storage media.

- ✓ Increase future liquidity potential for issuers and investors
- ✓ Paired smartphone trading app to buy & sell electronic securities
- ✓ Reduce friction from primary issuance through secondary trading
- ✓ Advanced compliance integrations

READY TO OFFER INCREASED LIQUIDITY ASSURANCE TO ISSUERS AND INVESTORS IN YOUR JURISDICTION?
